

# TRAVELLER

A chart for tracking events in space combat for Mongoose Traveller 2<sup>nd</sup> Edition (compatibility with other versions of Traveller may be possible, but I make no promises).

## Traveller Space Combat Tracker

### Introduction:

This sheet is designed to help a GM and players keep track of what is going on in a space combat.

### Instructions:

#### Setup:

The players ship is assumed to be on space "zero" of the tracker.

Place a token on the tracker for each other vessel - the tracker includes range indications to assist in choosing appropriate spaces, though note that these ranges should be considered approximate.

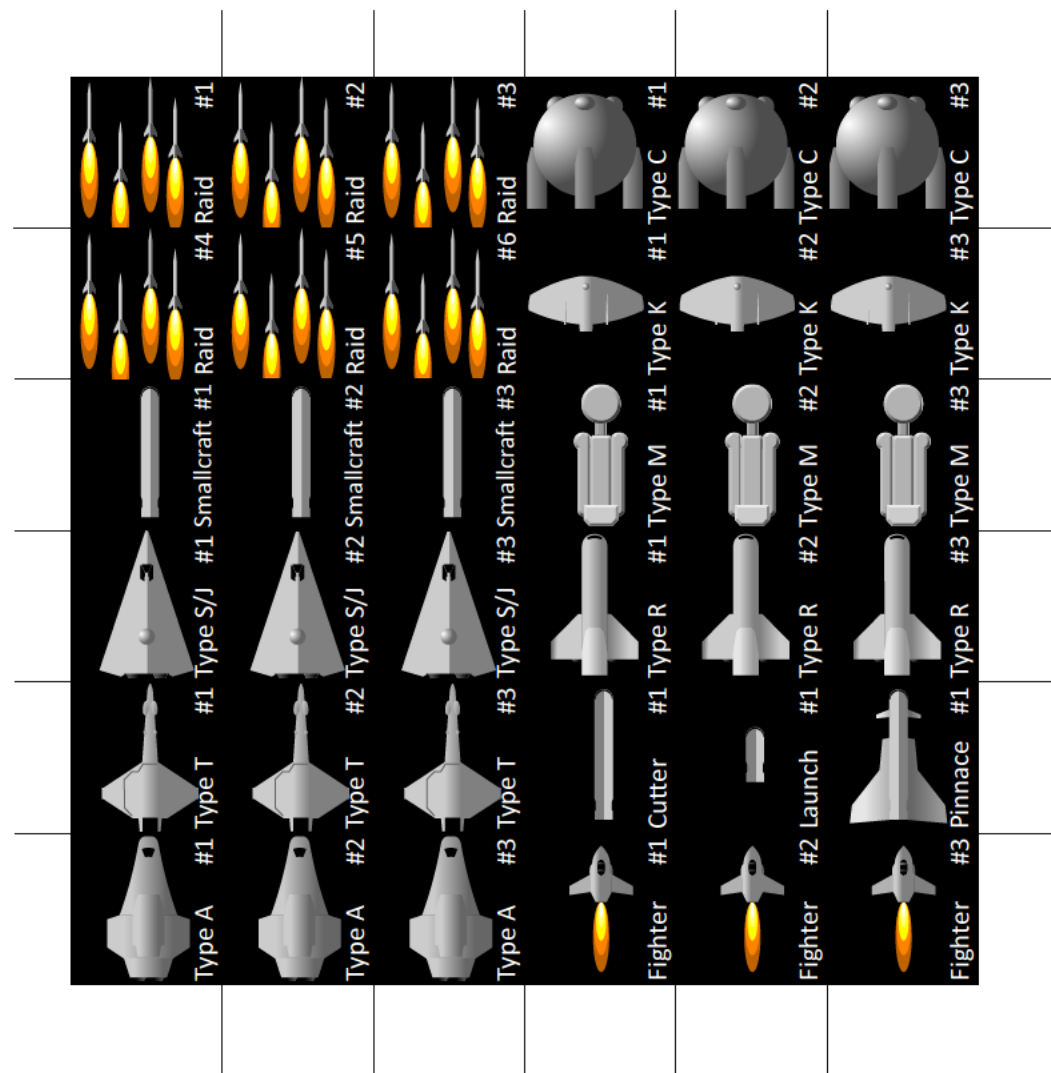

#### During Play:

In play, whenever the players expend thrust, adjust the range of *all other* tokens on the tracker (if trying to open the range, move *all* tokens away, and if closing move them closer).

Whenever hostile vessel or missile raid expends thrust, simply move the corresponding token accordingly.

When missiles are launched, simply place a raid token on the same space as the launching vessel and immediately move it a number of spaces equal to their Thrust towards their target. Thereafter the raid will move in the Movement Step as per normal.

Missile raids will attack their target if they land on the same space or pass their target when they or their target moves - resolve the attack during the Attack Step as usual so that the defender has an opportunity to use point-defense fire.

## Dogfight Range

	1 km	10km	500 km	1,250 km	2,000 km	4,000 km	6,000 km	8,000 km	10,000 km	11,500 km	13,000 km	14,500 km
